PROFESSIONAL SUMMARY

Computer Science graduate (CGPA: 8.80) with hands-on experience building backend applications, REST APIs, and automation workflows using Java, Python, and JavaScript. Experienced in working across the software development lifecycle, including backend integration, debugging, testing, and deployment in agile environments. Built projects using Spring Boot, FastAPI, PostgreSQL, and cloud tools, with strong interest in backend engineering and scalable software systems.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, C, C++, SQL

Backend & Frameworks: Spring Boot 3.3, Spring Security, Spring Data JPA, FastAPI, Node.js, Express.js

APIs & Integration: RESTful API Design, JWT Authentication, Web Services, Swagger/OpenAPI, Postman

Databases: PostgreSQL, MySQL, Redis (caching), DuckDB, Flyway Migrations, Hibernate ORM

Cloud & DevOps: AWS S3, AWS Lambda, Docker, CI/CD Pipelines, Git, Linux, Maven

SDLC & Testing: Agile/Scrum, SIT, UAT, Defect Tracking, Exception Handling, Technical Documentation

AI / ML & Tools: spaCy, scikit-learn, LangChain, TF-IDF, NER, Vector Databases, Jupyter, VS Code

PROFESSIONAL EXPERIENCE

Applied AI Intern | DevRev — IIT Madras Research Park, Chennai • Feb 2025 – Jul 2025

- Designed and maintained automated document and data processing workflows, reducing cloud function executions by 60% and improving end-to-end system reliability.
- Automated internal operational processes by integrating REST APIs and backend services, improving workflow efficiency and exception handling.
- Built analytics dashboards using DuckDB and notebook tools to monitor extraction accuracy, processing trends, and operational insights.
- Performed debugging, performance tuning, and quality validation of application components in an agile, CI/CD-driven environment.
- Maintained technical documentation for workflows, configurations, and system processes across version-controlled repositories.

AIML Intern | Weretech Solutions Pvt. Ltd. • Sep 2023 – Oct 2023

- Built an intelligent chatbot using LLM frameworks and vector databases; contributed to backend API integration, text preprocessing pipelines, and performance tuning for AI-powered features.
- Gained foundational experience in application middleware and semantic search — applicable to Lowe's enterprise application integration requirements.

KEY PROJECTS

College Placement Portal — Java 21, Spring Boot 3.3, Spring Security, PostgreSQL, Redis, AWS S3, Docker

- Architected an enterprise-grade backend using Spring Boot 3.3 with Java 21 virtual threads — handling student applications, company drives, multi-round interview tracking, and TPO query management for a college's entire placement lifecycle.
- Designed a 10-entity relational schema (users, students, drives, applications, rounds, round_results, offers, eligibilities, companies, tpo_queries) with Flyway migrations and Hibernate ORM; enforced complex eligibility business rules (semester gating, CGPA thresholds, placement lock) in the ApplicationService layer.
- Implemented Spring Security with JWT authentication and role-based access control (STUDENT, COMPANY, TPO, ADMIN); integrated Redis for session caching and AWS S3/MinIO for resume and offer letter file storage.
- Followed complete SDLC: entity design, schema migration, security layer, service logic, global exception handling, and Swagger/OpenAPI documentation — producing production-quality, maintainable code.

ATS Resume Screening System — Python, FastAPI, scikit-learn, spaCy, NLP

- Designed a RESTful API system (FastAPI) that classifies and extracts structured data from unstructured resume text, achieving 75%+ precision using TF-IDF vectorization, cosine similarity, and NER-based skills extraction.
- Built a full text preprocessing pipeline (regex, spaCy, stopwords removal, named entity recognition) with structured schema validation and exception handling for malformed inputs.
- Implemented a weighted scoring model: semantic similarity (40%), keyword extraction (30%), NER-based skills match (30%) — demonstrating algorithmic problem-solving and data quality enforcement.

EDUCATION

Bachelor of Engineering — Computer Science | National Institute of Engineering • 2021 – 2025 • CGPA: 8.85 / 10

COMMUNITY & CAMPUS INVOLVEMENT

- Volunteered at IEEE Blood Donation Camp (WIE Section) — managed event organization and donor registration logistics.
- Coordinated departmental AI Summit — handled registrations, session logistics, and certificate distribution.
